

# PERFECT MATCH!

N0x sensor meets macsRemote Services – enabling workshops to master complex electronics.

Highly reliable: Complies with OEM specifications.

Durable: Designed to resist engine vibrations and high temperatures.

Wide application area: Standard on passenger and commercial vehicles which comply with Euro 5 and Euro 6 regulations.

Immediate detection: Real-time monitoring.

Calibrating, coding, resetting and releasing parts and components.

Service work on vehicles with secured systems (Security Gateway): Ready for Sermi certified workshops.

Direct remote access for complex cases without complicated installation.

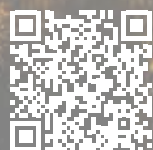

Secure vehicle communication with original OE tools and software.

Minimizes vehicle downtime through efficient repair of related faults. Added value remains in the workshop – no expense due to OE transfer.
